Small Lab. Big Results.

SCANNING

HI RESOLUTION SCANNING

Our Durst Sigma scanner is a state-of-the-art solution to digitizing negatives or positives. Using proprietary software and algorithms, the Sigma can achieve unsurpassed digital files from any film. Fuji's Image Intelligence also optimizes color and density so that more detail is retained in scans. You will notice more detail in backgrounds, shadows, highlights and more. Digital ICE is also used to further enhance scans by removing defects in the film. See what you are missing with our high end scanning. We view every scan on the monitor and color correct every single image. No automation software is used. We also offer flatbed scanning of reflective artwork.

NEGATIVE/POSITIVE FILM SCANNING	
Film Scan—Any Size/ Any MB	\$7.50
Please Note About Film Scans: Digital ICE is used for dust/scratch removal. Scans are color correct and embedded with an ICC profile. Excessively scratched/damaged film may be subjected to additional costs.	
FLATBED/REFLECTIVE SCANNING	
Size up to 8.5x11	\$12.00
Please Note About flatbed Scans: Digital ICE is used for dust/scratch removal. Scans are color correct and embedded with an ICC profile. Excessively scratched/damaged film may be subjected to additional costs.	

All scans are recorded onto CD/DVD at a cost of \$4. This includes a blank CD, Sleeve, and recording time.
